How is this a Scavenger Hunt?

- One of the best positive reinforcements in learning is actually being rewarded for working hard!
- Just as in a scavenger hunt, once you find the ‘loot’ or ‘treasure’, you get to keep it and see what kind of goodies are in store for you.
- In this strategy, the key is to set mini goals for yourself such as:
  - Finding 5 vocab definitions
  - Finding a couple key ideas to take notes on or study
  - Finding specific information in a textbook’s broad topics
- After each ‘mark’ or ‘milestone’ you set for yourself, reward yourself with your favorite choice of treat, like a piece of candy or anything in moderation that you love to indulge in!
- Lastly, after 45 minutes of hard studying, take a 10 minute break to relax or do anything to take your mind away from studying!

This Strategy Works Best for Classes Such as Biology and Most Other Types of Sciences!

- Scanning for information is the most effective way of getting information fast, just like a scavenger hunt.
- This strategy focuses on quickly looking through parts of a book to find exactly what you’re looking for instead of reading the entire chapter or chapters.
- Once you have an idea of what you’re looking for, ie, specific questions, what to study, main ideas or topics of interest, quickly look through the main topics of the chapter of your book to target the information that suits your needs.

Scavenger Hunt Reading Strategy

Do you like scavenger hunts? Do you like rewards once you find what you’re looking for?
